ACADEMIC PROJECT:

Title :Cricket Team Selection And Analysis By Using DEA Algorithm In Python

Duration: 45 Days

Description :A new method for cricket team selection using Data Envelopment Analysis (DEA) is proposed. DEA algorithm is proposed, which is the formulation for evaluation of cricket players in different capabilities using multiple outputs. This evaluation process determines efficient and inefficient cricket players and ranks them on the basis of DEA scores. The ranking can be used to decide the required number of players for a cricket team in each cricketing capability. A real dataset 2018 year data, Cricket players having various capabilities is used to choose the best cricket team. The estimated method has the advantage of considering multiple factors related to the performance of players in multiple capabilities collected from ESPN crickinfo and aggregates their scores using a linear programming DEA model. This DEA Aggregation gives the scores of players objectively instead of using subjective computations. The estimated DEA method can be used to form a national cricket team from several clubs or a team of top cricketers.
